I'm working on the delta-v budget for everything. I want them to be flexible and useful for most landing situations, but I do want to balance it so that you have to really think about how to use them.

Here are the first few pics of the 2.5m command pod in testing...

Nice! I really like the look of the pieces. (nice and compact) Any chance of a 2.5m skycrane to go along with the 1.25?

Integrated antenna into the command pod would be nice (if you haven't already thought of it.)

Finally something that works well stylistically with the Alcor capsule. I hate throwing a round tank underneath it.

Original post updated... with download link! It's early... I may well have forgotten something major... don't crucify me! Constructive criticism very welcome!
